

# City Park Master Plan | Public Meeting #3

## INTEGRATE WATER SYSTEMS INTO THE PARK DESIGN

This station will explore strategies for making stormwater management feel like a cohesive and essential part of the Park. These stormwater improvements will be designed to enhance and diversify the Park experience with a new collection of ecotypes.

## CELEBRATE WATER ACCESS AS THE UNIFYING PARK EXPERIENCE

This station will introduce improvements to the visitor's experience that draw on the value of the historic lagoons throughout the Park, making the water's edge more accessible, more active, more comfortable, and more ecologically diverse.

## THE WOODED ISLAND

This station will continue the development of the well-received concept of the Wooded Island, which the Project Team has brought back to life from the original 1930's Master Plan where the island was partially implemented through the WPA's efforts to create lagoons by utilizing the water from local bayous. Revitalizing the Wooded Island concept will create a central Park destination in the future, providing an immersive experience of native Louisiana landscapes that would only otherwise be seen outside of the city.

## CITY PARK HISTORY STATION

This station will narrate the rich history of City Park through key moments that have been critical in shaping the landscape and its role in the city since the 19th. This will shed light on overlooked pieces of New Orleans history, educate visitors, and help identify ways to make the Park more inclusive.

## IMPROVE STORMWATER MANAGEMENT IN THE PARK

This station will show how the Park currently performs during a range of storm events and explore ways to reduce the burden on the city's stormwater infrastructure.

## IMPROVE WATER QUALITY WITHIN THE PARK

This station will focus on analyzing the existing conditions of the Park's lagoons system, the health of the shoreline, and the impact of stormwater runoff on the Park's waterways. It will also identify methods for managing the ecological health of the lagoons.

## PUBLIC MEETINGS RESULTS & FEEDBACK

This station will display results and key takeaways from previous public-engagement efforts including surveys, the structure of the Master Plan process, and a review of the last public meeting's content about Circulation & Access.
